

Gross Domestic Product at Factor Cost By Industry

Introduction

This paper provides estimates of the gross domestic product (G.D.P.) at factor cost by industry for each of the northern territories for the period 1967 to 1977 and describes the methodology used to derive the data series. The paper is divided into four parts. Part I introduces the nature and uses of the concept of G.D.P. at factor cost by industry, while Part II summarizes the results and trends in the data for each Territory. Part III explains the industrial classification, data sources and methodology used to compile G.D.P. at factor cost and finally, Part IV presents the detailed tables of the distribution of G.D.P. at factor cost by industry for each Territory for the period 1967 to 1977.

Part I

Nature and Uses of Gross Domestic Product at Factor Cost By Industry

The G.D.P. at factor cost by industry can best be described as a set of economic statistics that provide information on the industries that generate total output in the economy and on the relative share or value of output that is attributable to each industry. The value of output (G.D.P.) is measured at factor cost rather than market price. Factor cost represents the total cost of the resources used in creating output and essentially differs from G.D.P. at market price in that indirect taxes and subsidies are excluded from the valuation.

The industrial distribution of G.D.P. at factor cost is designed to depict the structure of economic activity in the economy. Individual companies and operations are classified according to industrial groups that are engaged in the same or a similar kind of activity, regardless of whether the activity is carried out by the government or by a business enterprise or whether for profit or on a non-profit basis. In this context, the industrial grouping subdivides a number of activities in the government and household sectors and thus differs from all other distributions of economic indicators by industry, i.e. wages and salaries, corporate profits, etc.

Generally speaking, the G.D.P. at factor cost by industry is a basic economic indicator that is used with other statistics for aggregate economic analysis and planning. As a planning tool, the industrial distribution enables the analyst and decision-maker to measure industrial expansion and contraction and consequently, to analyze economic change and development in specific industries and in the economy over time.

1. Indirect taxes and subsidies are not included in the valuation since these items do not represent payments for resource use and further, they cannot be allocated to the specific industries that have borne the cost.

Part II

Summary of Results

Tables 1 and 2 (pages 8 and 9) provide detailed information on the distribution of gross domestic product at factor cost by industry for the Northwest Territories and Yukon respectively for the years 1967 to 1977 inclusive. The most significant characteristics and trends that can be identified from the tables are summarized below for each Territory.

Northwest Territories

Table 1 indicates that throughout the 1967-1977 period, the mining and oil and gas industry group generated between 30-45% of G.D.P. or the largest share of total output in the NWT economy. Mining accounted for the greater part of the industry's contribution to total output. Transportation, storage, communications and other utilities, services and government have, over time, each produced between 10 and 20% of total output, although each industry's position has shifted over the 11 year period. The remaining industries including finance, insurance and real estate, retail trade and construction have accounted for the remaining portion of total G.D.P.

During the 1967 to 1977 period, the services, finance, insurance and real estate industries and government increased their share of total output at the expense of the mining and oil and gas industry. Total output originating in the mining and oil and gas industry declined from 45% in 1967 to 32% in 1977, while at the same time, the share of output allocated to services increased from 14% to 22% and output in finance and government rose from 5% to 9% and 13% to 16% respectively. Some minor fluctuations occurred on an individual industry basis from year to year, however these variations did not alter the overall industrial composition of G.D.P. at factor cost.

Yukon

Table 2 presents information on the industrial distribution of G.D.P. at factor cost for the Yukon for the years 1967 to 1977. Data provided in the table shows that during the period, the mining and oil and gas industry generated between 28% and 48% of total output in the Yukon and prevailed as the dominant source of production in the Territorial economy. The transportation, storage, communications and other utilities and service industry groups have on an annual basis, combined to consistently produce about 40% of the total Yukon G.D.P. Other industries such as finance, insurance and real estate, retail trade and government contributed to total output in a smaller proportion relative to the other industries. The finance group created between 9% and 13% of output with retail trade and government each contributing equally to about 5% of the annual output in the Yukon.

Between the years 1967 to 1977, the share of output allocated to individual industries in the Yukon fluctuated and shifted from year to year. The share of total output in the mining and oil and gas industry declined from 37% in 1967 to 28% in 1977,

while increases in the portion of output were recorded in the finance group (from 9% to 13%) and in the construction industry (share rose from 2% to 9%). On the other hand, the share of output in transportation, services and government remained relatively unaltered over the 1967-1977 period and as such, these industries contributed to a degree of stability in the Yukon economy.

Part III

Sources and Methods

This part of the paper, which is divided into two sections, provides a detailed discussion of the sources and procedures employed in deriving the G.D.P. at factor cost by industry for the Northwest Territories and Yukon. Section A describes the industry group classification and the allocation of individual industries and firms with operations in each Territory. Section B explains the sources and procedures used to compile and disaggregate the components of G.D.P. at factor cost by industry.

SECTION A

Industrial Classification

The classification system used to derive the industrial breakdown of G.D.P. at factor cost is based on sub-dividing all sectors and operations in the economy into common units or establishments that are engaged in similar kinds of activities. As such, all transactions relating to government business enterprises and households are grouped with business enterprises according to specific industrial categories outlined in the Standard Industrial Classification Manual.

A listing of the industry groups and the specific northern companies and operations included in each category is given below. Some of the industry groups have been combined to preserve the confidentiality of data and others have been excluded since the level of activity in the Territories is very small or nil relative to other industry groups.

1. Agriculture - Very little agricultural activity occurs in the Territories and therefore, this industry group was not included in the distribution of G.D.P. at factor cost by industry.
2. Fishing and Trapping - This group includes small unincorporated businesses and persons engaged in fishing and trapping for cash income as well as government operations in game management.
3. Forestry - The forestry group includes all primary logging activity undertaken by corporate establishments and small unincorporated businesses and government and business enterprise activities involved in forestry patrol, fire inspection, fire fighting, forest nurseries, reforestation and other forestry services.

-
1. Standard Industrial Classification Manual, 1970, Statistics Canada Catalogue No. 12-501

4. Mining, Oil and Gas

- a) Mining - The mining group includes the operations of producing mines and establishments involved in mineral exploration and development in the NWT and Yukon.
- b) Oil and Gas - The oil and gas group includes all operational and producing activities involving oil and gas and all exploration and development activities.

These industry groups have been combined since disaggregated data were unavailable for each industry and for all components of G.D.P. at factor cost.

- 5. Manufacturing - The manufacturing industry group includes the manufacturing activities of corporate establishments, unincorporated businesses and self-employed persons in the Territories. Manufacturing in the Territories consists of sawmilling, fish processing, food, beverage and metal fabricating, cooperative activities and various arts and crafts.
- 6. Construction - This industry group includes the operations of the contract construction industry group and small businesses primarily engaged in construction activity. Contract construction in the construction industry is executed by general contractors and special trade contractors.
- 7. Transportation, Storage, Communications and Other Utilities - These industry groups have been combined into one group in order to preserve the confidentiality of some of the data collected.

- a) Transportation - The transportation group includes the operations of all local air carriers¹ located in the Yukon, the Yukon operations of the White Pass Yukon Co. Ltd.², activities of the Northern Transportation Co. Ltd., busline companies and small trucking operations. In addition, government services involving the operation and maintenance of airports, piers, docks, wharves, highways, bridges and tunnels are included in the transportation group.
- b) Storage - The storage industry has been excluded from the industrial distribution of G.D.P. at factor cost since these types of activities are very negligible in the Territories.
- c) Communications - The communications group includes the operations of Bell Canada, Canadian National Telecommunications, Canadian Broadcasting Corp., Telesat, Post Office and other government communication services in the NWT and Yukon.

-
- 1. Local air carriers includes all air carriers operating in the North, excepting Pacific Western Airlines, Transair, Nordair and CP Air. These air carriers are classified as regional and national carriers and the operations are principally located and allocated to other provinces.
 - 2. WhitePass Yukon Co. Ltd. is a transportation company with operations in B.C., Yukon and Alaska.

- d) Other Utilities - This group includes the operations of the Northern Canada Power Commission, privately-operated electric power establishments and small unincorporated businesses engaged in the operations of public utilities, i.e., water delivery and sewage services.
8. Wholesale Trade - This group only includes the operations of small businesses involved in wholesale trade and the activities of the Kelly Douglas Co. in the Yukon.
9. Retail Trade - The retail trade industry group includes the operations of both incorporated and unincorporated businesses involved in retail trade plus the NWT and Yukon Government Liquor Control Board activities. The retail trade industry in the Territories largely consists of small independent retail outlets, catalogue sales, vending machines, chain and independent stores, department stores and motor vehicle sales.
10. Finance, Insurance and Real Estate - This group includes the operations of chartered banks, trust and mortgage companies, Central Mortgage and Housing Corp., the NWT and Yukon Housing Corporations, finance companies, insurance companies (fire, theft, auto), small financial businesses (i.e., chartered accountants, income tax specialists) and small real estate operations including all tenant rents paid in the NWT and Yukon.
11. Public Administration and Defence - This group includes government operations that are not classified in any other branch of economic activity or those operations that are essentially concerned with general administration, protection of persons and property and internal services of the public service. The group also includes all defence (military) operations located in the NWT and Yukon.
12. Community, Business and Personal Services - The service trades embrace a wide range of activities engaged in by government, incorporated and unincorporated businesses, professional, business and personal service establishments. Included in the group are government operations engaged in education, hospital, medical care and welfare services and private enterprises involved in various professional areas (i.e., lawyers, dentists, doctors, etc.), amusement and recreation services, business services (i.e., engineering and architecture), accommodation and food services and miscellaneous personal services (i.e. bankers and beauticians).

SECTION 3

Sources and Methods

The components of G.D.P. at factor cost include wages, salaries and supplementary income, profits and other investment income, net income of unincorporated business including rent, inventory valuation adjustment and capital consumption allowances. Data for all of these components, aggregated for all industries, were obtained from the sectoral accounts and aggregate measures of G.D.P. at market price for each Territory.

1. Pavich, M., Economic Accounts, Northwest Territories, 1967-1974, Ottawa, 1979.
Pavich, M., Economic Accounts, Yukon, 1967-1974, Ottawa, 1979.

Most of the individual components of G.D.P. at factor cost were compiled on an industrial basis in the sector accounts and therefore, no further methodologies were required to derive industry estimates. Thus, wages and salaries, corporation profits, net incomes of unincorporated business, inventory valuation adjustment and capital consumption allowances were previously disaggregated on an industrial basis. Supplementary income and government operations were not allocated to specific industries and consequently, special allocators were employed to derive the industrial distribution.

Details of the sources and methodologies employed in calculating the industry estimates and in distributing government operations by industry are discussed below for each component of G.D.P. at factor cost.

1. Wages, salaries and supplementary income

This component is made up of the sum of "wages and salaries" and "supplementary income". Data on wages and salaries by industry were tabulated and obtained from the Household Sector report.¹ (Refer to pages 16 to 25).

Government wages and salaries were disaggregated by industry according to information and allocators provided by Statistics Canada and Statistics Canada publications on a disaggregation of government payrolls by economic function. (Economic functions coincide with specific industry groupings, i.e., Transportation and Communications, Protection of Persons and Property, Health, etc.).

Data on supplementary income by industry were available for the mining industry and government. Supplementary income for the government was allocated by industry according to the allocators on government wages and salaries by industry. Ratios were calculated for each industry and applied to the estimates of government supplementary income. In the case of distributing the remaining portion of supplementary income by industry, ratios of wages and salaries for each industry to total wages and salaries were calculated and applied to allocate supplementary income to the industry groups other than mining and government.

2. Profits and Other Investment Income

This component is composed of the sum of "corporation profits before taxes" and "other investment income" (interest and miscellaneous investment income).

Estimates of corporation profits before taxes were compiled on an industry group basis according to the methodology discussed in The Business Sector report.² (Refer to pages 20 to 30). Data on other investment income were obtained from the Business Sector and according to National Accounts procedures, was totally allocated to the Finance, Insurance and Real Estate industry group.

-
1. Pavich, M., Economic Accounts, The Household Sector, Northwest Territories, Yukon, 1967-1974, not published.
 2. Pavich, M., Economic Accounts, The Business Sector, Northwest Territories, Yukon, 1967-1974, not published.

3. Net Income of Unincorporated Business Including Rent

This component is made up of net incomes of unincorporated business and the net imputed rental income associated with owner-occupied housing.

Data on net incomes of unincorporated business by industry were obtained from Revenue Canada, Taxation and were accordingly allocated to each industry.

Estimates of the net imputed rental income associated with owner-occupied housing were obtained from the Household Sector report (refer to pages 32 to 38) and, as per National Accounts methodology, were allocated to the Finance, Insurance and Real Estate industry group.

4. Inventory Valuation Adjustment

Estimates of inventory valuation adjustment by industry were developed according to the sources and procedures outlined in The Business Sector report (refer to pages 31 to 34).

5. Capital Consumption Allowances

Data on capital consumption allowances for individual industries and for the government were obtained from Statistics Canada.

Government capital consumption allowances were disaggregated by industry according to the allocators and ratios used to estimate government wages and salaries by industry (refer to page 6).

The individual components of G.D.P. at factor cost were summed for each industry group and the industrial distributions (as shown in Part IV) were calculated accordingly.
